

AMENDMENTS TO THE SPECIFICATION:

Amend the specification as follows:

Replace the paragraph beginning at line 10, page 3, with the following rewritten paragraph:

The normal information is indicated with numerals, letters, illustrations, or telltales, while the ~~came-taken~~ camera-taken image is a moving picture in which a distant object is smaller than a nearer one. Therefore, the ~~came-taken~~ camera-taken image is necessary to be indicated with an increased scale to provide a desirable scale image to the driver, so that the image is larger than the indication of the normal information. That is, the head-up type display system has an optical system to enlarge the image as well as a function to alternatively indicate the normal information and the camera-taken image.

Replace the paragraph beginning at line 2, page 7, with the following rewritten paragraph:

FIG. 3A is a view showing a normal indication [[, and]];

FIG. 3B is a view showing an image indication of a camera-taken image;
